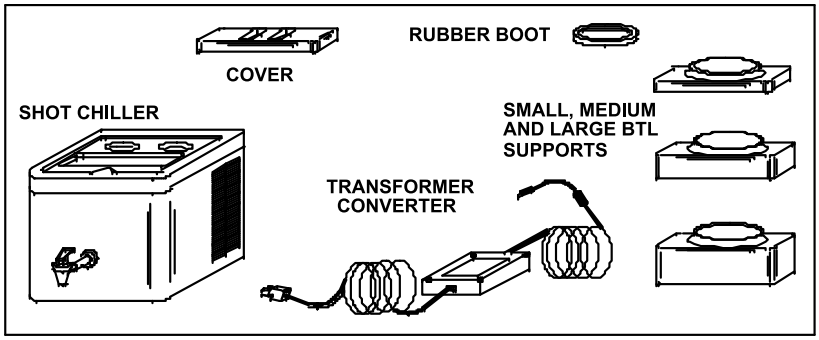
Vinotemp Shot Chiller Dispenser
Setup and Cleaning Instructions

"Drink Responsibly"

THE FOLLOWING PARTS ARE SUPPLIED:



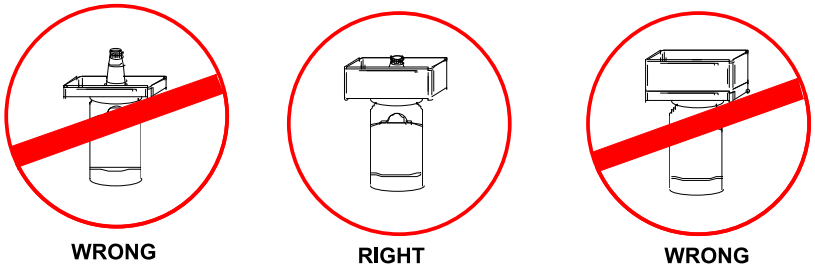
1. Pre-chill the bottle of liquor you will be dispensing in your Shot Chiller dispenser in the freezer.
2. Choose the bottle adapter that best fits the type of bottle you are dispensing. This is done by placing the bottle upright and then choosing the adapter that allows the tip of the bottle to extend past the bottom of the adapter approximately ½" to ¾". Put the adaptor on the shoulder of the bottle you are using.
3. Fill the reservoir with the freezer-chilled liquor approximately ½" from top of the reservoir. It will hold a whole 750 ML. bottle.
4. Next either:
   a. Place the adapter on the Shot Chiller and then place a freezer-chilled bottle of liquor in the adapter for display and additional reserve.
   b. Place the reservoir cover on the reservoir.
5. Plug the power supply into the Shot Chiller and then into a 120V AC electrical outlet. When plugging the adapter into the socket of the chiller, make sure the groove is facing the correct position (FACING DOWN).
6. You are now ready to dispense below freezing chilled shots.
7. Note: The Shot Chiller was designed to maintain your liquor at below freezing temperatures while dispensing, if you fill the Shot Chiller with warm liquor it should be allowed to chill overnight.
8. **Do not place a warm bottle of liquor in the dispenser unless you allow it to chill overnight.**
9. If the Shot Chiller is to be left running be sure the reservoir is full otherwise unplug your Shot Chiller, dispense all the liquor and dry the reservoir with a soft cloth.

CLEANING: Unplug the unit, drain and rinse the reservoir by opening the faucet and rinsing with water.
Do not get power section wet.
Dry thoroughly with soft cloth.

CHOOSING PROPER BOTTLE SUPPORT

Install bottle support upside down on the bottle. If bottle extends too far past the support the reservoir will not fill to proper capacity. If bottle does not extend past support lip and into the reservoir the liquor will over fill and spill onto counter

FOR PROPER FIT BOTTLE MUST EXTEND PAST THE LIP OF THE RESERVOIR APPROXIMATELY 1/2".



NOTE: When plugging the adapter into the socket of the chiller, make sure the groove is facing the correct position (FACING DOWN) - OR THE UNIT WILL BECOME HOT!
